List of Figures

The Turbine Pilot's Flight Manual
Fifth Edition, Gregory N. Brown and Mark J. Holt

CHAPTER 3

Turbine Engine and Propeller Systems

	Page Number
FIGURE 3.1 Reaction engines: a balloon and a gas turbine engine.....	12
FIGURE 3.2 Power strokes in reciprocating engines and associated processes in turbine engines.....	12
FIGURE 3.3 How a gas turbine engine works.....	13
FIGURE 3.4 Centrifugal-flow compressor	14
FIGURE 3.5 Axial-flow compressor	14
FIGURE 3.6 High- and low-pressure assemblies of a two-spool turbine engine.....	16
FIGURE 3.7 Basic components of a two-spool core turbine engine	16
FIGURE 3.8 Turbine engine comparison showing small turbojet, small turbofan, and turboprop (core turbine engine highlighted in each)	17
FIGURE 3.9 Turbine engine performance comparison	18
FIGURE 3.10 Large turbofan (greater than 10,000 pounds of thrust) and geared turbofan engine	19
FIGURE 3.11 Direct-drive turboprop engine (core turbine engine highlighted).....	21
FIGURE 3.12 Reverse-flow, free-turbine turboprop engine (core turbine engine highlighted)	21
FIGURE 3.13 Differentiating direct-drive from free-turbine turboprop engines after shutdown	21
FIGURE 3.14 Jet engine powerplant instruments.....	22
FIGURE 3.15 Turboprop engine powerplant instruments.....	23
FIGURE 3.16 Jet thrust quadrant.....	24
FIGURE 3.17 Turboprop power quadrant.....	24
FIGURE 3.18 Engine fuel control unit comparison.....	25
FIGURE 3.19 Typical turbine engine start sequences.....	27
FIGURE 3.20 Two types of jet thrust reversers.....	34
FIGURE 3.21 In flight, the primary governor uses engine oil pressure to control propeller pitch	35
FIGURE 3.22 How a primary governor works (turboprop engines less than 2,000 shp)	36
FIGURE 3.23 Beta valve directs additional oil pressure to the prop hubs for ground and reverse operations....	37
FIGURE 3.24 Power levers control beta valves	38
FIGURE 3.25 Propeller synch on multiengine aircraft.....	38
FIGURE 3.26 Propeller pitch.....	40
FIGURE 3.27 Propeller P-factor. (Figure and comments depict clockwise-rotating propeller installation, as viewed from behind.).....	41
FIGURE 3.28 Propeller slipstream effects	42
FIGURE 3.29 Critical engine on propeller-driven aircraft.....	43

CHAPTER 4

Turbine Aircraft Power Systems

FIGURE 4.1 Simple waterwheel	46
FIGURE 4.2 Reference waterwheel system	47
FIGURE 4.3 Comparison of aircraft power systems with reference waterwheel system	47
FIGURE 4.4 Basic electrical circuits.....	49
FIGURE 4.5 Basic electrical components	50

FIGURE 4.6	Integrated drive generator (IDG).....	51
FIGURE 4.7	Variable speed constant frequency generator (VSCF).....	51
FIGURE 4.8	Variable frequency generator (VFG).....	51
FIGURE 4.9	Comparison of lead-acid, ni-cad, and lithium-ion battery performance over time.....	53
FIGURE 4.10	Electrical faults.....	55
FIGURE 4.11	Electrical buses.....	57
FIGURE 4.12	Aircraft electrical system diagram (shown unpowered.).....	59
FIGURE 4.13	Reading an aircraft electrical system diagram.....	60
FIGURE 4.14	Aircraft electrical system: fully powered (APU off).....	61
FIGURE 4.15	Aircraft electrical system: battery power only.....	62
FIGURE 4.16	Distribution of electrical equipment by bus.....	63
FIGURE 4.17	Aircraft electrical system: right generator bus fault.....	64
FIGURE 4.18	Hydraulic properties: power transmission.....	66
FIGURE 4.19	Hydraulic properties: mechanical advantage.....	67
FIGURE 4.20	Basic hydraulic components.....	68
FIGURE 4.21	Hydraulic accumulator.....	69
FIGURE 4.22	Aircraft hydraulic system diagram.....	70
FIGURE 4.23	Backup hydraulic pumps.....	71
FIGURE 4.24	Bleed air.....	73
FIGURE 4.25	Pneumatic system components.....	73
FIGURE 4.26	Common APU location.....	75
FIGURE 4.27	Typical APU (auxiliary power unit).....	75

CHAPTER 5

Major Aircraft Systems

FIGURE 5.1	Flight control surfaces.....	79
FIGURE 5.2	Trailing edge flaps and leading edge devices (LEDs).....	79
FIGURE 5.3	Roll spoilers.....	81
FIGURE 5.4	Ground and flight spoilers.....	81
FIGURE 5.5	Flight control surface position indicator.....	82
FIGURE 5.6	Fly-by-wire controls versus mechanical flight controls.....	83
FIGURE 5.7	Sidestick controller used in some fly-by-wire aircraft.....	83
FIGURE 5.8	Cabin pressurization.....	84
FIGURE 5.9	Cabin altitude versus aircraft altitude.....	85
FIGURE 5.10	Cabin pressurization indicators.....	85
FIGURE 5.11	Pressurization system components.....	85
FIGURE 5.12	Pressurization valves as they appear on the exterior of the aircraft.....	87
FIGURE 5.13	Crew oxygen regulator and overboard oxygen discharge indicators.....	90
FIGURE 5.14	Heat exchangers.....	90
FIGURE 5.15	Operating principles of air cycle and vapor cycle machines.....	92
FIGURE 5.16	Air cycle machine (ACM).....	93
FIGURE 5.17	Vapor cycle machine (VCM, or “Freon unit”).....	93
FIGURE 5.18	Aircraft environmental system (PACK).....	95
FIGURE 5.19	Fuel system components.....	96
FIGURE 5.20	Magnetic fuel quantity measuring sticks.....	99
FIGURE 5.21	Effect of lateral fuel balance on wing bending moments.....	99

CHAPTER 6 Dedicated Aircraft Systems

FIGURE 6.1	Pneumatic deicing boots	103
FIGURE 6.2	Thermal wing anti-ice.....	103
FIGURE 6.3	TKS liquid wing anti-ice.....	103
FIGURE 6.4	Electrically heated propeller anti-ice system (“hot props”).....	104
FIGURE 6.5	Inertial separator engine anti-ice system (“ice vanes” shown on a reverse-flow, free-turbine turboprop)	105
FIGURE 6.6	Automatic brake.....	110
FIGURE 6.7	Annunciator or advisory panels	111
FIGURE 6.8	Flight deck annunciator panel and lights	112
FIGURE 6.9	Engine-indicating and crew-alerting system (EICAS).....	115
FIGURE 6.10	Electronic centralized aircraft monitoring (ECAM)	115
FIGURE 6.11	Engine fire suppression system	117
FIGURE 6.12	Fire protection system: flight deck components.....	119
FIGURE 6.13	Lavatory fire protection	119
FIGURE 6.14	Cargo compartment fire protection.....	121
FIGURE 6.15	Typical aircraft antenna locations.....	121
FIGURE 6.16	Angle of attack vane and flight deck indicating system.	122
FIGURE 6.17	Typical air data computer and pitot static systems schematic.....	125

CHAPTER 7 Limitations

FIGURE 7.1	Maximum operating limit speeds (indicated by the airspeed indicator “barber pole”).....	128
FIGURE 7.2	Typical transport category aircraft crosswind limitations.....	129
FIGURE 7.3	Flight maneuver envelope	131
FIGURE 7.4	Flight maneuver envelope with design gust values.....	132
FIGURE 7.5	Flap extension/retraction/maneuvering speeds for a large turbine aircraft	134
FIGURE 7.6	Typical types of flap and landing gear restrictions (placarded limits)	134

CHAPTER 8 Normal Procedures

FIGURE 8.1	Crew coordination in a multipilot flight deck	138
FIGURE 8.2	Flight deck flow check.....	145
FIGURE 8.3	Challenge-response checklist for a turboprop aircraft.....	145
FIGURE 8.4	Do-list checklist	146
FIGURE 8.5	The four Safety Management System (SMS) components.	151

CHAPTER 9 Emergency and Abnormal Procedures

FIGURE 9.1	Typical emergency checklists	160
FIGURE 9.2	Typical abnormal checklist (nonemergency).....	161
FIGURE 9.3	Coefficient of lift curve	169
FIGURE 9.4	An aircraft can be stalled at any attitude or airspeed.....	169
FIGURE 9.5	Primary flight display (PFD) showing “alpha max” speed and pitch limit indicator	172
FIGURE 9.6	Effect of bank angle on stall speed	173

FIGURE 9.7	The effect of surface contamination on lift.....	174
FIGURE 9.8	Stall Recovery Template (from FAA AC 120-109A, Appendix 1, Table 1)	175
FIGURE 9.9	Nose high recovery template (UPRT) (from FAA AC 120-111).....	178
FIGURE 9.10	Nose low recovery template (UPRT) (from FAA AC 120-111)	179

CHAPTER 10

Performance

FIGURE 10.1	Takeoff and landing V-speeds	183
FIGURE 10.2	Engine-out drift-down requirements.....	185
FIGURE 10.3	Takeoff and landing data card (TOLD card).....	186
FIGURE 10.4	Temperature-derived reduced takeoff thrust	188
FIGURE 10.5	Derated thrust	189
FIGURE 10.6	Performance calculations on an electronic device.....	190
FIGURE 10.7	Energy management.	191
FIGURE 10.8	Thrust and drag versus airspeed in level flight.....	192
FIGURE 10.9	Total drag curve comparison: (A) jet-powered aircraft and (B) propeller aircraft	193
FIGURE 10.10	Stall speed versus altitude	195
FIGURE 10.11	Finding the maximum rate of climb airspeed	196
FIGURE 10.12	Cost Index (CI) Economy Cruise	199
FIGURE 10.13	Airplane performance summary	200

CHAPTER 11

Weight and Balance

FIGURE 11.1	Maximum zero fuel weight (MZFW)	201
FIGURE 11.2	Mean aerodynamic chord (MAC).....	202
FIGURE 11.3	Center of gravity (CG) as a percentage of mean aerodynamic chord (%MAC)	203
FIGURE 11.4	Weight and balance on an electronic device.....	204
FIGURE 11.5	Typical regional aircraft load manifest and random loading rules	205

CHAPTER 12

Airplane Handling, Service, and Maintenance

FIGURE 12.1	Flight deck preflight flow checks	210
FIGURE 12.2	Exterior preflight inspection	211
FIGURE 12.3	Minimum equipment list (MEL).....	213
FIGURE 12.4	Sample nonessential equipment and furnishings (NEF) page.....	214
FIGURE 12.5	Sample FAA holdover time guidelines for SAE Type I Fluid on critical aircraft surfaces composed predominantly of aluminum	217
FIGURE 12.6	Sample FAA holdover time guidelines for SAE Type II Fluids	218
FIGURE 12.7	Sample FAA holdover time guidelines for SAE Type IV Fluids.....	219

CHAPTER 13

Navigation, Communication, and Electronic Flight Control Systems

FIGURE 13.1	HSI (horizontal situation indicator).....	224
FIGURE 13.2	(A) Single-cue flight director versus (B) dual-cue flight director	226
FIGURE 13.3	Autopilot and flight director panel mode selectors.....	227
FIGURE 13.4	EFIS (electronic flight instrumentation system).....	227

FIGURE 13.5	EFIS primary flight display (PFD).....	228
FIGURE 13.6	Flight mode annunciator (FMA).....	229
FIGURE 13.7	HUD or HGS.....	230
FIGURE 13.8	Head-up guidance system (HUD or HGS) symbology.....	231
FIGURE 13.9	RNAV (area navigation) course versus VOR flight plan.....	231
FIGURE 13.10	Global positioning system (GPS).....	232
FIGURE 13.11	Required navigation performance (RNP) vs. actual navigation performance (ANP).....	234
FIGURE 13.12	Receiver autonomous integrity monitoring (RAIM).....	236
FIGURE 13.13	Typical RNAV approach minima table.....	237
FIGURE 13.14	Longitude and latitude on the globe.....	238
FIGURE 13.15	Latitude/longitude plotted on a map of the continental U.S.....	239
FIGURE 13.16	Flight management system (FMS) components.....	240
FIGURE 13.17	Flight management computer (FMC).....	241
FIGURE 13.18	Control display unit (CDU).....	241
FIGURE 13.19	EFIS moving map display of lateral and vertical navigation.....	241
FIGURE 13.20	FMC-generated command markers.....	242
FIGURE 13.21	FMS preflight contents page.....	242
FIGURE 13.22	FMS identification page.....	242
FIGURE 13.23	FMS alignment page.....	243
FIGURE 13.24	FMS route page.....	244
FIGURE 13.25	FMS performance page.....	244
FIGURE 13.26	Typical ACARS communications pages.....	246
FIGURE 13.27	ADS-B network.....	249

CHAPTER 14 Hazard Avoidance Systems

FIGURE 14.1	How radar works.....	260
FIGURE 14.2	Azimuth scan.....	261
FIGURE 14.3	Vertical scan.....	261
FIGURE 14.4	Radar antenna types.....	262
FIGURE 14.5	Typical radar display and control functions.....	263
FIGURE 14.6	Radar reflectivity of a thunderstorm.....	263
FIGURE 14.7	Precipitation gradients.....	264
FIGURE 14.8	Radar shadow.....	264
FIGURE 14.9	Unusual echo shapes to avoid.....	265
FIGURE 14.10	How Doppler radar works.....	266
FIGURE 14.11	Radar display showing area navigation (RNAV) courseline.....	267
FIGURE 14.12	Electrical discharge or lightning detectors.....	267
FIGURE 14.13	Traffic alert and collision avoidance system (TCAS).....	269
FIGURE 14.14	Enhanced ground proximity warning (EGPWS) terrain display.....	270
FIGURE 14.15	Predictive wind-shear warning system (PWS) display.....	270
FIGURE 14.16	Typical wind shear warning systems and aural alerts.....	271
FIGURE 14.17	Flight envelope protection.....	273

CHAPTER 15 Operational Information

FIGURE 15.1	Aviation speeds review.....	276
FIGURE 15.2	Constant IAS climb to crossover altitude, then constant Mach Climb.....	277

FIGURE 15.3	300 KIAS/.79 Mach climb schedule (Boeing 757-200).....	278
FIGURE 15.4	Supersonic shock wave formation on an airfoil	279
FIGURE 15.5	“Coffin corner” and buffet margins.....	280
FIGURE 15.6	Effect of turning on performance	281
FIGURE 15.7	Flight management-generated optimum cruise altitude	282
FIGURE 15.8	Temperature’s effect on altitude capability (generic jet aircraft)	283
FIGURE 15.9	The effect of altitude and temperature on performance.....	283
FIGURE 15.10	Swept wing.....	284
FIGURE 15.11	Dutch roll.....	285
FIGURE 15.12	Winglets	286
FIGURE 15.13	Taillets, vortex generators, boundary-layer wing fences, vortilons, stabilons, and ventral fins ..	287
FIGURE 15.14	International altimetry	293
FIGURE 15.15	Strategic Lateral Offset Procedure (SLOP).....	295
FIGURE 15.16	Wing tip vortices.....	296
FIGURE 15.17	Wing tip vortices on takeoff and landing	297
FIGURE 15.18	Effect of crosswind on wing tip vortices.....	297

CHAPTER 16

Weather Considerations for Turbine Pilots

FIGURE 16.1	Microburst.....	300
FIGURE 16.2	Effects of a microburst on an aircraft	301
FIGURE 16.3	Wind shear recognition and pilot recovery technique.....	303
FIGURE 16.4	Types of structural icing	304
FIGURE 16.5	More ice forms on surfaces with a shorter radius of curvature	305
FIGURE 16.6	The effect of surface contamination on lift.....	306
FIGURE 16.7	Tailplane icing.....	308
FIGURE 16.8	Jetstream	311
FIGURE 16.9	Mountain wave	313
FIGURE 16.10	Runway Condition Assessment Matrix (RCAM)	319
FIGURE 16.11	Runway condition reporting.....	320

APPENDIX 3

Transport Airplane Performance and Operating Limitations

FIGURE A.1	Balanced field length.....	359
FIGURE A.2	Net takeoff flight path	361
FIGURE A.3	Takeoff run vs. takeoff distance	363
FIGURE A.4	Takeoff run over a clearway	364
FIGURE A.5	Twin engine, four segment climb.....	365
TABLE A.1	Maximum bank angles	365
FIGURE A.6	Required second segment climb performance at climb limit weight	366
FIGURE A.7	Driftdown procedure.....	368
FIGURE A.8	Landing distance limitations.....	369
FIGURE A.9	Sample landing distance limitation problem.....	370
TABLE A.2	Summary of dispatch rules for large, turbine-powered, transport category airplanes	371
