

REMOTE PILOT VIRTUAL TEST PREP

Quick Start Guide

The best way to study for the FAA Knowledge Exam is simply to follow this course as presented in *Virtual Test Prep*, completing each lesson in the order given.

- 1. Read:** (Recommended, not required): Begin by reading a lesson in *The Complete Remote Pilot* by Bob Gardner and David Ison (sold separately). This is the recommended companion textbook that can serve as the foundation to the required aeronautical knowledge.
- 2. Watch:** Upon completion of each textbook lesson, move on to the same video in *Virtual Test Prep* for an instructional presentation of the subject matter.
- 3. Study:** After completing a DVD lesson, open ASA *Prepware* software to review and answer the questions for that subject, using STUDY mode.
- 4. Repeat:** Conduct steps 1–4 for all of the lessons in the course.
- 5. Practice:** When you have finished all the lessons, use *Prepware* to take practice exams. Upon successful completion of 2 practice tests, each with a score of 80% or better, you are ready to take your official FAA Knowledge Exam at a testing center.

Suggested Road Map

Watch and Learn		
Introduction		00:04:10
Lesson 1—Regulations	Federal Regulations, Remote Pilot Certificate and Privileges, Preflight Action, Operating Rules	00:54:06
Lesson 2—National Airspace System	Resources, Airspace Classification, Operational Requirements, Airport Operations	01:05:34
Lesson 3—Weather	Effects of Weather on sUAS, Aviation Weather Resources	00:56:28
Lesson 4—Preflight Considerations	Aircraft Loading and Performance, Maintenance and Inspection Procedures, Pilot Physiology	00:42:13
Lesson 5—Flight Operations	Preflight Inspection, Communication Procedures, Emergency Procedures and Accident Reporting, Risk Management	00:54:26
Test Tips		00:03:33
Total Running Time		04:45:00
